

**Your technological partner
for the oil and gas sector**

A new economic cycle driven by oil and gas

A new era is dawning in the Mozambican economy. The potential of the oil and gas sector is huge and expectations for the extractive industry in Mozambique are high. The big challenge now is to ensure that companies operating in the sector are managed efficiently.

PRIMAVERA technology ensures efficient management

The requirement to comply with legal and tax obligations, the technological competences of human resources, monetary transactions in various currencies and the demands of logistical operations all amount to major challenges for the sector.

Challenges which can only be overcome successfully through the use of technology. But not just any technology. To meet the demands of the sector, support will be required from management solutions that:

- 1 Are simple and easy to use;
- 2 Are constantly in step with the legislation in force;
- 3 Offer rigorous and efficient stock management in various currencies;
- 4 Offer payroll processing in line with the legislation, and taking into account a range of allowances in various currencies;
- 5 Offer financial reporting in various currencies;
- 6 Can easily be integrated with other management systems;
- 7 Offer the latest information to support decision-making;
- 8 Provide overall and integrated management of your business.

PRIMAVERA, your technological partner

The integrated management of information is the cornerstone of any successful management team. There is no point in having various information systems handling different core areas of the company if those systems are not interconnected. The result will be a loss of information and of productivity, as well as difficulty in keeping abreast of performance and taking strategic decisions.

With PRIMAVERA's solutions you are guaranteed solid and integrated management of your business, from the moment the raw materials are extracted through to distribution and profitability analysis. These solutions will provide you with the overall technological support you need to manage your business.

A central management system (ERP) appropriate to your sector

PRIMAVERA's ERP is updated continually to ensure a timely and permanent response to all of the legal and tax obligations in force in Mozambique. Since this an extensible platform, **even if you use another system that you share with the company's head office, you can easily integrate it with the PRIMAVERA ERP** in order to simplify your response to tax obligations, in terms not only of management and financial reporting but also as regards human resource management.

Multilingual, multi-currency, multi-reporting

The PRIMAVERA ERP lets each user select their preferred language. This means that even if your company employs staff members who speak different languages, they can all use the same system.

Another important feature is the multi-currency facility. With the PRIMAVERA ERP, you can invoice in Meticals and receive payment in other currencies, manage stocks in various currencies and do your financial reporting in whatever currency you want.

Rigorous and secure accountancy, financial and human resource management

The PRIMAVERA ERP is a central management hub from which you can rigorously manage information that can impact your results, from purchasing, stock and customer management to accounts, banks, cash-flow, payroll, management accounting and the financial management of projects. All of these data are integrated in order to cut administrative work to a minimum and guarantee the absolute trustworthiness of the information.

Accounting updated in real time

Bank transactions are automatically processed in the accounting area of the system, ensuring cash-flow figures are kept permanently up-to-date and providing access to updated, ready-to-send financial reports.

Complementary solutions that encompass all of the sector's needs

PRIMAVERA offers a comprehensive range of reliable solutions for your entire management team:

A solid ERP that has been keeping pace with the Mozambican reality for more than 20 years

PRIMAVERA's ERP (enterprise resource planning) is adapted to Mozambique's reality, keeping pace with the country's legal, tax and technological evolution. Today our experience spans more than 20 years.

Integrated production management

An integrated production management solution connects the data from the production line to the system's logistics and financial management area, ensuring efficiency and rigour throughout the production process.

Integrated warehouse management

A robust warehouse management system lets you monitor all stock entering and leaving your warehouses, transfers between warehouses and order deliveries, with all of the data being integrated in the ERP's logistics and financial area.

Equipment and asset maintenance

PRIMAVERA also offers an equipment management system that will help you implement preventative maintenance strategies, thereby extending the useful life of each piece of equipment and capitalising on your investment.

Management reporting

Fast and accurate reporting is guaranteed with PRIMAVERA Office Extensions, a solution that lets you extract a set of management reports on the financial, sales and human resource areas.

Analytical decision-making support system

And to ensure your decisions are based on trustworthy and always up-to-date data, you can rely on Business Analytics. A data analysis solution that gathers information from the various systems, providing management indicators that let you keep track of the company's performance and help you define strategic, tactical and operational guidelines.

Proven experience in the sector

PRIMAVERA has more than 40,000 client companies across various countries and is the market leader in Portugal, Angola, Mozambique and Cape Verde. Numerous companies operating in the oil and gas sector use PRIMAVERA's ERP to support their financial management.

Here are just a few examples:
